## Math Content Based Professional Development

STOP

MAKING MATH  
HARD TO LEARN!

Our math content based professional development workshops use a common sense approach to **building success on success**. Bill's "6+1" strategy sets students up for success by connecting preparation to instruction, notes, homework, test prep and assessments. The "+1" is the importance of student teacher relationships and how they can boost achievement. While Bill believes what works is work, he also understands the needs of struggling students and students living in poverty, and provides the repetition they need to be more comfortable learning math. He does this by introducing new topics with nice numbers and using repeated scaffolding so students reach grade level expectations.

## See what Dr. Geihs had to say about our workshops:

*Bill's workshops are purposely designed to build success on success. His knowledge of mathematics combined with his knowledge and insight of working with students struggling in math and students living in poverty brings uniqueness to his brand of professional development in mathematics. Based on the foundation that students should feel comfortable in their knowledge and understanding of the mathematics, Bill provides content based professional development for teachers and administrators that will assist them in helping all students succeed in mathematics.*
